

Wayne Chengto me, Vincent, Michael, Peiyu, Brian, Ted, Joy  1:28 AM (13 hours ago)

Michael - need your help ASAP when you get in to find the best performing 4x6 printer in our building, dust it off, clean it, and print the attached LABEL MOCKUP_v1 label 10 times - let's look over it and see if we need to adjust anything

Note that we need to check:

- label should be exactly 4 × 6 inches, and each of the two large barcodes exactly 1.5 inches tall. If either is off, the printer is scaling and everything else is moot.
- Check the quiet zones with a ruler — a quarter inch of clear white from the last bar to any line.
- print several copies, look at them under good light, and mail the cleanest. Bar Code grades what you send.

Rafael/Peiyu/Vincent:

We're a bit under the gun here so need to move quickly - long story short, UCC label failed for reasons below:

- Mark for barcode is missing leading zero.
- Mark For barcode is too short.
- Mark For barcode has inadequate x-dimension.
- Store number has incorrect font size
- SSCC-18 barcode is too short.

Resolutions requested :

- Zone C - This defect is a hardware/maintenance issue with your thermal printer. The print head needs to be cleaned or replaced. A print head is a consumable component of a thermal printer which needs to be cleaned/replaced regularly. more info
- Zone G - All Mark for GS1-128 symbols should begin with followed by a character, Application Identifier (91), plus a 6-digit Mark For number (Include a leading zero and the five digit mark for store number). more info
- Zone G - Please include the application identifier of 91, followed by a padded 0 and the five digit store number. more info
- Zone G - The Mark For barcode must be at least 1.25 inches tall. A height of 1.5 inches is recommended for optimal readability and scanning accuracy. more info
- Zone G - The x-dimension is a measure of the narrowest element of the barcode and affects the overall width of the barcode. The narrow element (x-dimension) of the Mark For barcode must be a minimum of .02" (20 mils). more info
- Zone H - Store number must be at least 20 point type. more info
- Zone I - The SSCC-18 barcode must be at least 1.25 inches tall. A height of 1.5 inches is recommended for optimal readability and scanning accuracy. more info

We built this Label Generator to address all these changes for now, in case it takes too long for us to fix in Asgard (opens for someone on a Stanley Claude login):

<https://claude.ai/artifact/KVzUghPZ5zcTndKfZWbA36?sk=ZQJkRJvjKvklwgS1hd8yQw>

- Populates with the Excel attached
